

North Carolina Welcomes SabioAdvantec

SabioAdvantec, an advanced technology R&D consulting firm, is a new arrival in North Carolina. SabioAdvantec has expertise in a variety of engineering disciplines combined with over 40 years of experience spanning basic research and R&D, in industries such as aerospace, oil and gas exploration, and biotechnology. The company provides engineering resources from its facility in Raleigh, NC, to assist clients in the product development process from early concept development through pre-manufacturing prototype, where the need for these resources is highest. “We founded the company from a passion for technology development and a desire to help. We have learned that the solution to a research or development challenge in one industry may often be realized by the adaptation of an existing solution from another, or by examination of the issue from another “point-of-view”. It is this breath of experience that we bring into service to address our client’s research and development challenges.”, says John Cheeseborough, president and co-founder.

SabioAdvantec emerged from a uniquely efficient and cost effective technology transfer and R&D infrastructure developed at the Weill Cornell Medical College in Manhattan, New York. The company provides detailed engineering and prototyping services to support its clients from initial concept development, through pre-manufacturing. The SabioAdvantec facility, is equipped to provide complete engineering support for concept and systems design, as well as mechanical, electrical, embedded systems, FPGAs, software and robotics. “Our objective is to be there to support our clients in the process from early stage research through pre-manufacturing prototype, where the need for engineering resources is the highest, and to deliver value and service above expectations.”, says Jacqueline Cheeseborough, SabioAdvantec Vice President and Co-Founder.

John, who serves as chief of engineering comes from a long background in technology development beginning at the NASA/ Caltech, Jet Propulsion Laboratory in California in the early 1970’s. Since then he has served at aerospace companies such as General Dynamics and Physics International; oil field services companies such as Schlumberger and Baker Hughes; biotech companies such as Guidant and Perceptive Bio Systems, and in education at Cornell University.
